

# **CS 412 Intro. to Data Mining**

## **Chapter 1. Introduction**

**Jiawei Han, Computer Science, Univ. Illinois at Urbana-Champaign, 2017**

# CS 412. Course Page & Class Schedule

- Textbook
  - Jiawei Han, Micheline Kamber and Jian Pei, *Data Mining: Concepts and Techniques* (3<sup>rd</sup> ed), Morgan Kaufmann, 2011
- Class Homepage:  
<https://wiki.engr.illinois.edu/display/cs412>
- Bookmark on course schedule page
- **Class Schedule: 9:30-10:45 am Tues./Thurs. @1404 SC**
- Office hours: 10:45-11:30am Tues./Thurs. @2132 SC
- Lecture media: recorded; but class attendance is critical

Jiawei Han

# CS 412. Course Work and Grading

---

# BSC\_DPDM23

Data Preparation and Data Mining

# Score

- Midterm (data preprocessing ปฏิบัติ (เดี่ยว)) 20%
- Final (ทฤษฎี data mining (เดี่ยว)) 20%
- Project (data preprocessing + data mining (กลุ่ม)) 30%
- Homework (แบ่งกลุ่ม ใหม่ทุกครั้ง) 20%
- Quiz ((เดี่ยว) ตามในห้อง) 5%
- Githup 5%

Final score = Score \* %attendance

((ทำ temple of content และกดเข้าไปได้))

# Chapter 1. Introduction

---

- Why Data Mining? 
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Why Data Mining?

---

- ❑ The Explosive Growth of Data: from terabytes to petabytes
  - ❑ Data collection and data availability
  - ❑ Automated data collection tools, database systems, Web, computerized society
  - ❑ Major sources of abundant data
    - ❑ Business: Web, e-commerce, transactions, stocks, ...
    - ❑ Science: Remote sensing, bioinformatics, scientific simulation, ...
    - ❑ Society and everyone: news, digital cameras, YouTube
- ❑ We are drowning in data, but starving for knowledge!
- ❑ “Necessity is the mother of invention”—Data mining—Automated analysis of massive data sets

# Chapter 1. Introduction

---

- Why Data Mining?
- What Is Data Mining? 
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# What Is Data Mining?

- ❑ Data mining (knowledge discovery from data)
- ❑ Extraction of interesting (non-trivial, implicit, previously unknown and potentially useful) patterns or knowledge from huge amount of data
- ❑ Data mining: a misnomer?
- ❑ Alternative names
  - ❑ Knowledge discovery (mining) in databases (KDD), knowledge extraction, data/pattern analysis, data archeology, data dredging, information harvesting, business intelligence, etc. *กານສົກຄະນາມງົງ* *ຈົດdata*
- ❑ Watch out: Is everything “data mining”?
  - ❑ Simple search and query processing
  - ❑ (Deductive) expert systems

# Knowledge Discovery (KDD) Process

- This is a view from typical database systems and data warehousing communities
- Data mining plays an essential role in the knowledge discovery process

# Example: A Web Mining Framework

## □ Web mining usually involves

- Data cleaning ผิดพลาด MISSING ข้าร็อป เติมยังไง/ส่วนบุคคลซึ่งนำไปใช้บันทึก ทำไปยัง  
ระบบข้อมูลงานขายหน่วย / Database
- Data integration from multiple sources รวมข้อมูล
- Warehousing the data
- Data cube construction มองในแบบ 3D ภาพ จังหวัด จังหวัด จังหวัด
- Data selection for data mining → หัวข้อที่ต้องการ ก่อเป็นโครงสร้าง  
Data mining
- Presentation of the mining results ? ถ้าใช้มีผลดีมาก  
- ดึงข้อมูลจากฐานข้อมูล  
Patterns and knowledge to be used or stored into knowledge-base  
เมืองที่มีการพัฒนาดีที่สุด เนื้อหาที่น่าสนใจ/หัวข้อที่สามารถนำไปสู่การตัดสินใจ

# Data Mining in Business Intelligence

# KDD Process: A View from ML and Statistics

- This is a view from typical machine learning and statistics communities

# Data Mining vs. Data Exploration

---

- Which view do you prefer?
  - KDD vs. ML/Stat. vs. Business Intelligence
  - Depending on the data, applications, and your focus
  
- Data Mining vs. Data Exploration
  - Business intelligence view
  - Warehouse, data cube, reporting but not much mining
  - Business objects vs. data mining tools
  - Supply chain example: mining vs. OLAP vs. presentation tools
  - Data presentation vs. data exploration

# Chapter 1. Introduction

---

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# **Multi-Dimensional View of Data Mining**

---

## **Data to be mined**

- Database data (extended-relational, object-oriented, heterogeneous), data warehouse, transactional data, stream, spatiotemporal, time-series, sequence, text and web, multi-media, graphs & social and information networks

## **Knowledge to be mined (or: Data mining functions)**

- Characterization, discrimination, association, classification, clustering, trend/deviation, outlier analysis, ...
- Descriptive vs. predictive data mining
- Multiple/integrated functions and mining at multiple levels

## **Techniques utilized**

- Data-intensive, data warehouse (OLAP), machine learning, statistics, pattern recognition, visualization, high-performance, etc.

## **Applications adapted**

- Retail, telecommunication, banking, fraud analysis, bio-data mining, stock market analysis, text mining, Web mining, etc.

# Chapter 1. Introduction

---

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined? 
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Data Mining: On What Kinds of Data?

---

- Database-oriented data sets and applications
  - Relational database, data warehouse, transactional database
  - Object-relational databases, Heterogeneous databases and legacy databases
- Advanced data sets and advanced applications
  - Data streams and sensor data
  - Time-series data, temporal data, sequence data (incl. bio-sequences)
  - Structure data, graphs, social networks and information networks
  - Spatial data and spatiotemporal data
  - Multimedia database
  - Text databases
  - The World-Wide Web

# Chapter 1. Introduction

---

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Data Mining Functions: (1) Generalization

- ❑ Information integration and data warehouse construction
  - ❑ Data cleaning, transformation, integration, and multidimensional data model
- ❑ Data cube technology
  - ❑ Scalable methods for computing (i.e., materializing) multidimensional aggregates
  - ❑ OLAP (online analytical processing)
- ❑ Multidimensional concept description: Characterization and discrimination
  - ❑ Generalize, summarize, and contrast data characteristics, e.g., dry vs. wet region

# Data Mining Functions: (2) Pattern Discovery

1

- Frequent patterns (or frequent itemsets)
  - What items are frequently purchased together in your Walmart?
- Association and Correlation Analysis

- A typical association rule  
ผ้าอ้อม  $\rightarrow$  啤酒 สิ่งของที่ซื้อกันเป็นคู่
- Diaper  $\rightarrow$  Beer [0.5%, 75%] (support, confidence)
- Are strongly associated items also strongly correlated?พัฒนาที่เสียสacrifice มากซึ่งกันและกัน
- How to mine such patterns and rules efficiently in large datasets?
- How to use such patterns for classification, clustering, and other applications?

น้ำซึ่งมีความสัมพันธ์  
ต่อไปด้วย

# Data Mining Functions: (3) Classification

2

- Classification and label prediction
  - Construct models (functions) based on some training examples
  - Describe and distinguish classes or concepts for future prediction
  - Ex. 1. Classify countries based on (climate)
  - Ex. 2. Classify cars based on (gas mileage)
  - Predict some unknown class labels
- Typical methods
  - Decision trees, naïve Bayesian classification, support vector machines, neural networks, rule-based classification, pattern-based classification, logistic regression, ...
- Typical applications:
  - Credit card fraud detection, direct marketing, classifying stars, diseases, web-pages, ...

ເລືອກ 1 column  
ທີ່ສະໜັບ ທີ່ມີສາມາດ  
ກຽມໄຕ້ ຕ້ອງກ່າວຂອງ ເຊັ່ນ ອົກລ່າຍ  
ກ່ວາ 9 ຊົບມາຫຼຸດ ຢັນໃຫຍ່ ຂາທ ກໍານົດ  
ກ່ວາ 9 ຊົບມາຫຼຸດ ຢັນໃຫຍ່ ຂາທ ກໍານົດ

# Data Mining Functions: (4) Cluster Analysis

- Unsupervised learning (i.e., Class label is unknown)
- Group data to form new categories (i.e., clusters), e.g., cluster houses to find distribution patterns
- Principle: Maximizing intra-class similarity & minimizing interclass similarity
- Many methods and applications

• จัดกลุ่มหัวนักศึกษา  
เนื่องจากเป็นผู้เรียนชั้นนำ: 例: อาจารย์  
อาจารย์สักน้ำใจ  
เราไปกันข้าม...

ตัวแทนของนักศึกษา  
เก็งกัน

# Data Mining Functions: (5) Outlier Analysis

- Outlier analysis
  - Outlier: A data object that does not comply with the general behavior of the data
  - Noise or exception?—One person's garbage could be another person's treasure
  - Methods: by product of clustering or regression analysis, ...
  - Useful in fraud detection, rare events analysis

# Data Mining Functions: (6) Time and Ordering: Sequential Pattern, Trend and Evolution Analysis

- Sequence, trend and evolution analysis
  - Trend, time-series, and deviation analysis
    - e.g., regression and value prediction
  - Sequential pattern mining
    - e.g., buy digital camera, then buy large memory cards
  - Periodicity analysis
  - Motifs and biological sequence analysis
    - Approximate and consecutive motifs
  - Similarity-based analysis
- Mining data streams
  - Ordered, time-varying, potentially infinite, data streams

# Data Mining Functions: (7) Structure and Network Analysis

- ❑ Graph mining
  - ❑ Finding frequent subgraphs (e.g., chemical compounds), trees (XML), substructures (web fragments)
- ❑ Information network analysis
  - ❑ Social networks: actors (objects, nodes) and relationships (edges)
    - ❑ e.g., author networks in CS, terrorist networks
  - ❑ Multiple heterogeneous networks
  - ❑ A person could be multiple information networks: friends, family, classmates, ...
  - ❑ Links carry a lot of semantic information: Link mining
- ❑ Web mining
  - ❑ Web is a big information network: from PageRank to Google
  - ❑ Analysis of Web information networks
  - ❑ Web community discovery, opinion mining, usage mining, ...

# Evaluation of Knowledge

---

- Are all mined knowledge interesting?
  - One can mine tremendous amount of “patterns”
  - Some may fit only certain dimension space (time, location, ...)
  - Some may not be representative, may be transient, ...
- Evaluation of mined knowledge → directly mine only interesting knowledge?
  - Descriptive vs. predictive
  - Coverage
  - Typicality vs. novelty
  - Accuracy
  - Timeliness
  - ...

# Chapter 1. Introduction

---

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Data Mining: Confluence of Multiple Disciplines

---

# Why Confluence of Multiple Disciplines?

---

- Tremendous amount of data
  - Algorithms must be scalable to handle big data
- High-dimensionality of data
  - Micro-array may have tens of thousands of dimensions
- High complexity of data
  - Data streams and sensor data
  - Time-series data, temporal data, sequence data
  - Structure data, graphs, social and information networks
  - Spatial, spatiotemporal, multimedia, text and Web data
  - Software programs, scientific simulations
- New and sophisticated applications

# Chapter 1. Introduction

---

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted? 
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Applications of Data Mining

---

- Web page analysis: classification, clustering, ranking
- Collaborative analysis & recommender systems
- Basket data analysis to targeted marketing
- Biological and medical data analysis
- Data mining and software engineering
- Data mining and text analysis
- Data mining and social and information network analysis
- Built-in (invisible data mining) functions in Google, MS, Yahoo!, Linked, Facebook, ...
- Major dedicated data mining systems/tools
- SAS, MS SQL-Server Analysis Manager, Oracle Data Mining Tools)

# Chapter 1. Introduction

- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# **Major Issues in Data Mining (1)**

---

- Mining Methodology
  - Mining various and new kinds of knowledge
  - Mining knowledge in multi-dimensional space
  - Data mining: An interdisciplinary effort
  - Boosting the power of discovery in a networked environment
  - Handling noise, uncertainty, and incompleteness of data
  - Pattern evaluation and pattern- or constraint-guided mining
- User Interaction
  - Interactive mining
  - Incorporation of background knowledge
  - Presentation and visualization of data mining results

# Major Issues in Data Mining (2)

---

- Efficiency and Scalability
  - Efficiency and scalability of data mining algorithms
  - Parallel, distributed, stream, and incremental mining methods
- Diversity of data types
  - Handling complex types of data
  - Mining dynamic, networked, and global data repositories
- Data mining and society
  - Social impacts of data mining
  - Privacy-preserving data mining
  - Invisible data mining

# Summary

---

- Data mining: Discovering interesting patterns and knowledge from massive amount of data
- A natural evolution of science and information technology, in great demand, with wide applications
- A KDD process includes data cleaning, data integration, data selection, transformation, data mining, pattern evaluation, and knowledge presentation
- Mining can be performed in a variety of data
- Data mining functionalities: characterization, discrimination, association, classification, clustering, trend and outlier analysis, etc.
- Data mining technologies and applications
- Major issues in data mining
